React State Management

State Management

React Hooks

Yohanes Demissie

Senior Software Engineer | Frontend-Leaning Full-Stack IC | React, TypeScript, UI Systems | Engineering Velocity | Business Savvy & Product Delivery

Seattle, Washington, United States

Summary

Senior Software Engineer with 5+ years of experience building scalable, high-performance web applications with a frontend focus and full-stack ownership.

I specialize in React, TypeScript, JavaScript, Node.js, and modern UI architecture, delivering reusable component systems, performance optimizations, and product-driven improvements that accelerate engineering velocity and improve user outcomes.

My work includes:

- Leading reusable UI system migrations
- Reducing feature delivery timelines by 25%+
- Improving release cycles from biweekly to weekly
- Driving measurable improvements in user engagement and performance

I'm a generalist engineer comfortable working across stacks (React, React Native, Vue, PHP/Drupal, REST APIs, cloud tooling) and ramp quickly in new systems to deliver impact.

With a background in Positive Psychology and strong computer science fundamentals, I approach engineering through both systems thinking and human-centered design — building products that make sense for users, product owners, and engineering teams alike.

Experience

Freelock Computing

Software Developer

December 2021 - Present (4 years 6 months)

Seattle, Washington, United States

- Led migration to reusable React component library, reducing feature development time by 25% and enabling shift from biweekly to weekly releases.
- Delivered performance-focused frontend enhancements exceeding quarterly targets.
- Owned ticket triage and prioritization workflows, improving team throughput by 30%.
- Acted as go-to engineer for frontend architecture decisions balancing scalability and speed.

BimmerGeeks

Web and Mobile Developer

August 2020 - December 2021 (1 year 5 months)

Atlanta, Georgia, United States

Re-architected customer-facing React UI, reducing bounce rate by 18% and increasing average session duration by 22% within three months.

Improved page-load performance by 20% through asset optimization and render-path improvements.

Ensured cross-platform reliability across desktop and mobile browsers, resolving critical UI and performance issues prior to release.

Code Fellows

Software Instructor Assistant

May 2018 - August 2020 (2 years 4 months)

Greater Seattle Area

Mentored 150+ students across multiple cohorts in JavaScript and Node.js development.

Guided student teams from wireframes through deployment, reinforcing industry best practices and engineering fundamentals.

LendMe, Inc.

Mobile and Web Developer

July 2018 - January 2019 (7 months)

Seattle, Washington, United States

Built an investor-facing web application from UI/UX wireframes to a production-ready product.

Accelerated MVP delivery from a projected 24-month roadmap to 6 months by scoping and executing an investor-focused release strategy.

Translated complex design requirements into reusable, client-facing web and mobile components.

Education

The Evergreen State College

Bachelor's degree, Psychology · (2012 - 2017)

Code Fellows

Software Development, Full-Stack JavaScript · (2017 - 2018)
